DETAILED ACTION

1. This Office Action is in response to the Amendment filed on 08/08/2003. Claims 1, 12, 24, 36, 44 and 52 have been amended. Claims 2-3, 8, 13-14, 20, 25-27, 32, 40, 48 and 56 have been cancelled. Claims 1, 4-7, 9-12, 15-19, 21-24, 28-31, 33-39, 41-47, 49-55 and 57-59 are presented for examination.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1, 4, 7, 9-10, 12, 15-16, 19, 21-22, 24, 28, 31, 33-34, 36, 39, 41-42, 44, 47, 49-50, 52, 55 and 57-58 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rosen et al. (US 6,014,090), herein after referred as Rosen, in view of Shoji et al. (US 6,564,254), herein after referred as Shoji.

Art Unit: 2141

4. As to claim 1, Rosen teaches a method and system for delivering information to a wireless device over a communication network, comprising:

sending environment information of the wireless device to a server on the communication network, wherein the environment information includes geographic location, local weather, date and time, and any combination thereof (Rosen teaches a geographic location identifier associated with a mobile device 130 is obtained and transmitted over wireless link 140 to a resolution server 110 and then resource servers 120 via telecommunications network 100. Also, as applicant admitted in first paragraph, page 16 of the Amendment filed on 08/08/2003 that it would be obvious to one of ordinary skill in the art to readily understand that when the geographic location of the mobile device is sent to the server, the time and date could also be sent and the server could use the received geographic location to perform a query or search to determine the current weather conditions at that location) (Rosen, Fig. 2, C4: L44-67 and C5: L1-12);

receiving identifiers from the server of the web sites most likely to be requested by a user of the wireless device in that environment (the results of the query associated with the received geographic location identifier, i.e., the associated resource server addresses, URLs, or identifiers, wherein each of which provides information of potential interest to the user, are sent to the mobile device 130) (Rosen, C5: L28-42 and C6: L5-33);

caching the identifiers for selection by the user (i.e., the list of associated resource server addresses, URLs, or identifiers, wherein each of which provides

Art Unit: 2141

information of potential interest to the user, can be stored on memory and can be displayed to the user for selection) (Rosen, C6: L63-67 and C4: L1-5).

However, Rosen does not explicitly teach the step of using the identifiers for lookahead data entry, wherein a user is not required to have previously entered the identifiers.

In the related art, Shoji teaches a method and system for specifying a location on a network by monitoring typed input (i.e., character or symbol) from the keyboard. If the input character/symbol were found in the local cache file, all URLs corresponding to that entered character/symbol would be passed to the browser and displayed so as to allow the user to select one therefrom (Shoji, Figs. 3-4, C18: L35-67 and C19: L1-11).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to combine the teachings of Rosen and Shoji to include the step of using the cached identifiers for lookahead data entry, wherein a user is not required to have previously entered the identifiers because it would allow the system to provide cached identifiers (URLs) for selection by the user to specify and access information such as Internet Web pages, over the communication network through a process that is both simple and user-friendly to increase portability and mobility for thin-client devices as PDA, wireless/mobile devices with limiting computing resources.

Art Unit: 2141

- 5. As to claim 4, Rosen-Shoji teaches the method of claim 1, including the step of personalizing which identifiers are pushed based on personalization information, i.e., based on the user profile (Rosen, C5: L59-67 and C6: L1-11).
- 6. As to claim 7, Rosen-Shoji teaches the method of claim 1, further including the step of displaying the identifiers on the wireless device (via user interface device 133) for selection by the user (Rosen, C6: L5-11 and Shoji, C19: L2-6).
- 7. As to claim 9, Rosen-Shoji teaches the method of claim 1, further including the step of periodically sending the geographic location the server (Rosen teaches the geographic location device can be a Global Positioning System (GPS) receiver, which provides a geographic identifier based on the location of the mobile communication device through GPS satellite system, hence, as long as the mobile communication device is turned on (or active) the geographic location identifier can be obtained and periodically transmitted to the telecommunication network (Rosen, C3: L3-31).
- 8. As to claim 10, Rosen-Shoji teaches the method of claim 1, further including the step of receiving URLs (resource server addresses) as the identifiers.
- 9. Claims 12, 15-16, 19 and 21-22 are corresponding system claims of method claims 1, 4, 7, and 9-10; therefore, they are rejected under the same rationale.

Art Unit: 2141

- 10. Claims 24, 28, 31 and 33-34 are corresponding computer-readable medium claims of method claims 1, 4, 7 and 9-10; therefore, they are rejected under the same rationale.
- 11. Claims 36, 39 and 41-42 are corresponding method claims of method claims 1, 7 and 9-10; therefore, they are rejected under the same rationale.
- 12. Claims 44, 47 and 49-50 are corresponding system claims of method claims 36, 39 and 41-42; therefore, they are rejected under the same rationale.
- 13. Claims 52, 55 and 57-58 are corresponding computer-readable medium claims of claims 36, 39, 41-42; therefore, they are rejected under the same rationale.
- 14. Claims 5, 17, 29, 37, 45 and 53 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rosen-Shoji, in view of Martin, Jr. et al. (US 6,363,419), herein after referred as Martin.
- 15. As to claim 5, Rosen-Shoji teaches the method of claim 1, but does not explicitly teach the step of pre-fetching content from at least one of the web sites indicated by the identifiers.

In the related art, Martin teaches a method of pre-fetching the content information addressed by the URL (in the background by the browser) during a time the user last

Art Unit: 2141

operated the browser so that the content information would always be immediately available for display to the user without requiring a network connection at idle time (Martin, C7: L60-67 and C8: L1-6).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the teaching of Rosen-Shoji to include the step of pre-fetching content from at least one of the web sites indicated by the identifiers (URLs) as suggested by Martin because it would allow the system to provide/display the content URL information that was cached/pre-fetched in the mobile device at an earlier time to reduce the significant amounts of time in waiting to receive web data from the web sites.

- 16. Claims 17 and 29 are corresponding system and computer-readable medium claims of method claim 5; therefore, they are rejected under the same rationale.
- 17. Claim 37 is a corresponding method claim of method claim 5; therefore, it is rejected under the same rationale.
- 18. Claims 45 and 53 are corresponding system and computer-readable medium claims of method claim 37; therefore, they are rejected under the same rationale.

Art Unit: 2141

19. Claims 6, 18, 30, 38, 46 and 54 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rosen-Shoji, in view of Wynblatt et al. (US 6,219,696), herein after referred as Wynblatt.

20. As to claim 6, Rosen-Shoji teaches the method of claim 1, but does not explicitly teach the step of informing the user that the identifiers have been received.

In the related art, Wynblatt teaches a method and system for providing targeted internet information to mobile terminal, wherein the URL queue unit is a repository of URLs and title strings, made of standard digital memory and the URL queue unit may have a facility to alert (notify) the terminal user when a new URL has been received and is available (Wynblatt, C4: L28-37).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the teachings of Rosen-Shoji to include the step of informing the user that the identifiers have been received as suggested by Wynblatt because it would allow the system to provide a more user-friendly process by alerting/notifying user that the information about traffic updates, weather, public emergency reports, advertisements, etc. for localized areas to user via WWW documents/sites is ready for accessing by received URLs.

21. Claims 18 and 30 are corresponding system and computer-readable medium claims of method claim 6; therefore, they are rejected under the same rationale.

Art Unit: 2141

- 22. Claim 38 is a corresponding method claim of method claim 6; therefore, it is rejected under the same rationale.
- 23. Claims 46 and 54 are corresponding system and computer-readable medium claims of method claim 38; therefore, they are rejected under the same rationale.
- 24. Claims 11, 23, 35, 43, 51 and 59 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rosen-Shoji, in view of Perrone et al. (US 6,157,705), herein after referred as Perrone.
- 25. As to claim 11, Rosen-Shoji teaches the method of claim 1, but does not explicitly teach the step of receiving URL keywords as the identifiers for speech recognition.

In the related art, Perrone teaches a method for receiving the voice command, associating the voice command with a resource server based on the resource identifier, and delivering the resource from the remote server to the client (Perrone, C8: L9-36).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the teachings of Rosen-Shoji to include the step of receiving URL keywords as the identifiers for speech recognition as suggested by Perrone because it would allow the system to provide user a faster way to navigate through a conventional website to access desired information by a voice command.

Art Unit: 2141

- 26. Claims 23 and 35 are corresponding system and computer-readable medium claims of method claim 11; therefore, they are rejected under the same rationale.
- 27. Claim 43 is a corresponding method claim of method claim 11; therefore, it is rejected under the same rationale.
- 28. Claims 51 and 59 are corresponding system and computer-readable medium claims of method claim 43; therefore, they are rejected under the same rationale.

Response to Arguments

- 29. In the remarks, applicant argued in substance that
- (A) Prior Art fails to teach or suggest "sending environment information of the wireless device to a server ... wherein the environment information includes geographical location, local weather, time and date, and any combination thereof".

As to point (A), Rosen teaches a geographic location identifier associated with a mobile device 130 is obtained and transmitted over wireless link 140 to a resolution server 110 and then resource servers 120 via telecommunications network 100 (Rosen, Fig. 2, C4: L44-67 and C5: L1-12). Also, as applicant admitted in first paragraph, page 16 of the Amendment filed on 08/08/2003 that it would be obvious to one of ordinary skill in the art to readily understand that when the geographic location of the mobile device is sent to the server, the time and date could also be sent and the server could

Art Unit: 2141

use the received geographic location as well to perform a query or search to determine the current weather conditions at that location). Hence, **Rosen** does teach "sending environment information of the wireless device to a server ... wherein the environment information includes geographical location, local weather, time and date, and any combination thereof".

(B) Prior Art fails to teach or suggest "using the identifiers for lookahead data entry, wherein a user is not required to have previously entered the identifiers".

As to point (B), before addressing the argument, Examiner submits that the language of the limitation cited in the quotation can be given broad and reasonable interpreted in light of the specification as the user can use the cached identifiers (i.e., list of received URLs that are already stored/saved in the cache) for lookahead data entry. Shoji teaches a method and system for specifying a location on a network by monitoring typed input (i.e., character or symbol) from the keyboard. If the input character/symbol were found in the local cache file, all URLs corresponding to that entered character/symbol would be passed to the browser and displayed so as to allow the user to select one therefrom, i.e., using lookahead data entry function to map the input character/symbol to the previously received/saved URLs/identifiers in the cache in order to retrieve the list of potential matching URLs to display for user selection (Shoji, Figs. 3-4, C18: L35-67 and C19: L1-11). Hence, Shoji does teach "using the identifiers for lookahead data entry, wherein a user is not required to have previously entered the identifiers".

Art Unit: 2141

- 30. Applicant's arguments as well as request for reconsideration filed on 08/08/2003 have been fully considered but they are not deemed to be persuasive.
- 31. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
